

# **GAME DATABASE DBMS PROJECT**

**Name:** Aman Kumar

**Roll No. :**21CHB0B05

**Branch:** Chemical Engineering

National Institute of Technology Warangal

## **Abstract**

The main aim of the Gaming Database is to store the info of all the games that are available in the internet. This includes the cost of the game, platform, genre of the game, available store, specifications of the system (if the game can be played on PC), and also the info of the developer. This can help the gamers to buy the game or know about the System requirements of a specific game more easily.

## **Features**

1. People can view the info of the game which has a popular rating in the market and can buy the game depending on the specifications of their System.
2. The location of the online game store is also available in the database. So, people can visit and can buy the game from the official game store.
3. People can browse for games that can run on recommended settings of the computers which have low specifications as well as high specifications.

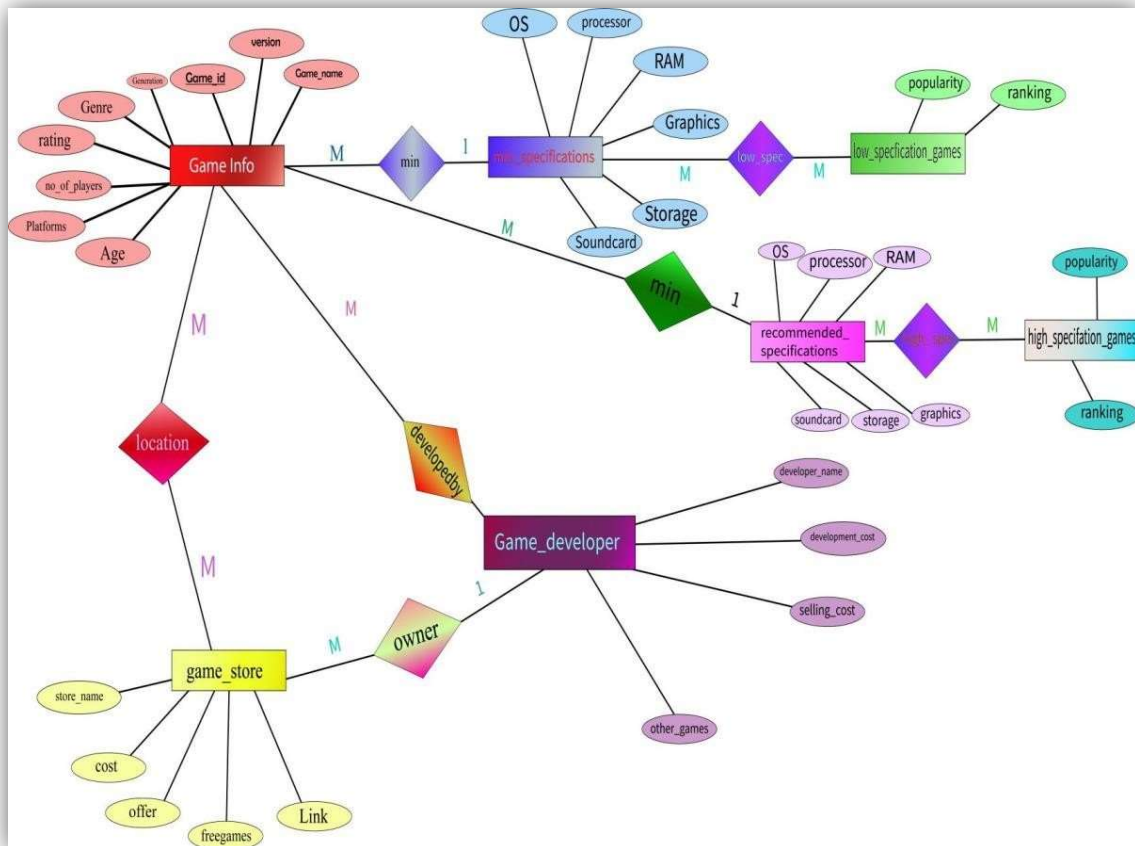

### **Entities in the database**

1. Game\_Info
2. Game\_Developer
3. Min\_specifications
4. Max\_specifications
5. lowspec\_games
6. highspec\_games
7. game\_store

### **Relationships in the database**

1. Minimum specifications
2. Recommended specifications
3. Location
4. Owner
5. Low spec
6. High spec
7. Developer
